### Introduction

#### Application

Where fluids must be stored or handled the Barksdale level switches with their large variety from a simple compact switch to multi level stations with lengths up to three meters are a logic choice (longer on request). When temperature and level measurement are required at the same time in tanks or reservoirs it is practical and economical to combine these in the level switches UNS1000 with temperature sensor and UNS2000 with additional temperature switch.

#### Level

All level switches are equipped with hermetically sealed reed switches. The contact is switched by an annular rod bar magnet which is positioned within the float.

The reed switch is available as normally closed, normally open or SPDT-contact. The only moving part of the level switch is the float sliding along the stem.

Contact modes (NO or NC) are defined on the basis of an empty tank and for installation through the top or through the bottom (when specified as "-U").

NO: (= Contact mode 1) Normally open,

- Closing contact by rising level
- Opening contact by falling level

NC: (= Contact mode 2) Normally closed,

- Opening contact by rising level

- Closing contact by falling level

The density (specific gravity) of the medium will influence the floating position of the float. In very light oils or solvents the float might change (lower) it's position up. If this is critical in your application consult us for details.

When not specified we will position the switch point for density 1 (water) and the switch action to be on moving upward.

Due to the hysteresis (dead band) of the reed contacts the action on rising level (reactuation point) will be several millimetres lower than the specified switch point.

#### **Temperature Measuring (optional)**

For temperature measurement we offer a PT 100 temperature sensor in our UNS1000 and UNS2000.

In the series UNS2000 we also offer temperature switch functions (TP) and the series UNS1000 with TS. The bi-metal element (TP and TS) are hermetically sealed, and are installed in the bottom of the stem.

The hysteresis of the TP type is only 3...10 K at mid range (depending on the operating temperature). The hysteresis of the TS type is  $30 \pm 15$  K.

#### Typical Applications for Level Switches with integrated Temperature Sensor

switching on heaters to avoid freezing of the medium,

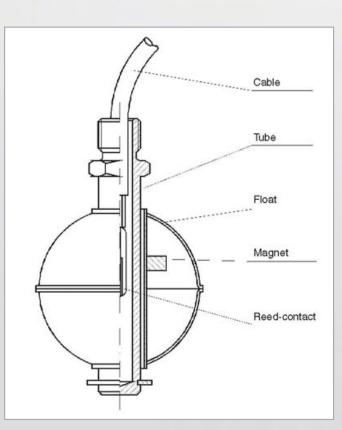

high or low temperature alarm in hydraulic tanks (TP type)

Type UNS2000 is also available with temperature switch and ATEXapproval.

(Other UNS-versions with ATEX-Ex ia on request)

#### **Features and Benefits:**

- Only moving part: The wearlessly working float.
- ► NO linkage, bellows or dynamic seals to wear, no service or spare parts needed.
- Easy to install, no calibration needed.
- Welded hollow floats in Stainless Steel and foamed floats in Buna-N (BN) are mostly used. The BN float is a closed cell Buna rubber, very light and very good in most hydrocarbons and water.
- Many special floats are available, consult us for details.
- The position of the float on the stem determines the contact status, open or close. By rotating the float the switch function will be reversed.
- Hysteresis of switch action only a few mm depending on type of contact and float.
- Reed contacts are designed to operate under vibration and are ideal for industrial applications.
- The UNS1000 and UNS2000 offer "custom made" specials at standard pricing.
- DNV-, GL- and BV-shipboard approvals with the series UNS1000 S, UNS2000 S and UNS-VA SB (ABS-, LR- und RINA-approvals on request).
- Option for high temperature -40 °C...+150 °C, specify -HT
- Option for splash or protection tube, specify: -DR
- Option for vertical adjustment, specify: VV
- Option for additional temperature switch(es) specify: -TP,-TS
- Option for temperature sensor PT100, specify: Pt100
- Mounting normally vertical downwards through the top, specify -U when mounting will be through the bottom vertical upwards. For pressures over 50 bar and/or very low density fluids we have special solutions, consult us for details.
- Many years of experience in level switches and many specials since, include many "exotics" in Hastelloy, Titanium, Plastic or Teflon, will help us to design the special version you might need.
- Approvals: see under www.barksdale.de

### Introduction

#### **General Technical Information**

The indicated values for power, voltage and capacity are valid for purely resistive loads. Quite frequently though, the loads are surrounded by inductive and capacitive com-ponents. Very often lamp loads must be switched. In this case, protection of the reed switch against voltage and power peaks must be considered. Of course, each case must be evaluated seperately. But we would like to give some guidelines concerning the wiring of reeds for different loads to avoid premature failure.

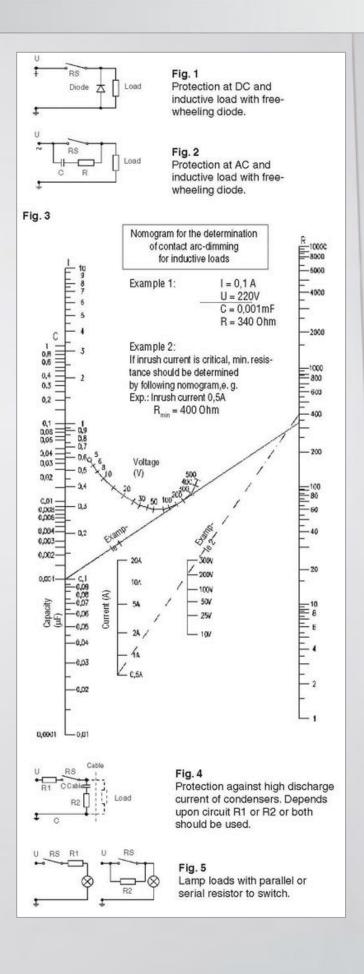

#### 1. Inductive loads

Contact protection is relatively simple for direct current (DC). A free-wheel diode is wired parallel to the load. Polarity must be established in such a way that the diode will inhibit at normal operational voltage (current) and short-circuit the power peaks which occur in the opposite direction when the switch opens. (see fig. 1). It is not possible to use a diode for AC. Here an arc-dimming unit has to be used. Generally this unit is a RC-unit wired parallel to the switch and hence in series with the load. Sizing of such an arc-dimming unit can be performed according to the nomogram shown in fig. 2 and 3.

#### 2. Capacitative loads and lamp loads

Contrarily to the inductive loads, there are inrush currents for capacitive loads and lamp loads which can lead to disturbance - even to the point of fusing of the contacts. During the wiring of loaded condensators (e.g. cable capacities) a sudden discharge will occur, with an intensity depending on the capacity and length of supply cable to the switch (can be regarded as series resistor). The discharge peak of the current is largely reduced by a series resistor to the condensator. Its size is deter-mined by the possibilities offered by the respective power circuit. It should be as high as possible in order to limit the discharge current to a permitted value. These criteria are valid analogously for the charging of condensors (see fig. 4).

Finally we want to give some details regarding the wiring of lamp loads. Cold incandescent filaments (switched off) have ten times smaller resistance than switched on filaments. That means during switch-on - even for a short period of time only - the current flow is ten times higher than in glowing, static condition of the lamp. This tenfold inrush current can be reduced to an acceptable level by a continously wired limiting resistor. Another possibility is the parallel wiring of a resistance to the switch. This will permanently heat up the switches of the lamp filament only so much as to just prevent it from glowing. Both protective modes result in the loss of capacity (see. fig 5).

### UNS-VA 1/8 VA27 (-HT)

Made of Brass or Stainless Steel with G1/8 - Mounting Thread

#### **Technical Data**

Stem and Mounting Thread	VA 1/8 = W.Nr. 1.4571, G1/8
Float	VA 27 = W.Nr. 1.4571, ø 27 mm
Max. Operating Pressure	15 bar (Float / +20 °C)
Max. Operating Temperature	-10 °C+105 °C, PVC-Cable -40 °C+150 °C, Silicone cable (-HT)
Min. Fluid Specific Gravity	0,71 g/cm <sup>3</sup>
Mounting Position	vertical, ±30°, through top or bottom
Protection Class	IP54
Electrical Connection	PVC-cable, max.3 x 0,34 mm <sup>2</sup> Silicone cable (-HT), max. 3 x 0,5 mm <sup>2</sup> 1 m / 3 m / 5 m length
Contact Mode	1 - SPST-switch (NO) 2 - SPST-switch (NC) 3 - SPDT-switch
Max. Contact Rating	NO / NC: 230 V AC / DC 2 A, 40 VA / W SPDT: 150 V AC / 100 V DC, 0.2 A, 3 VA / W
Weight	appr. 90 g
Approval	www.barksdale.de

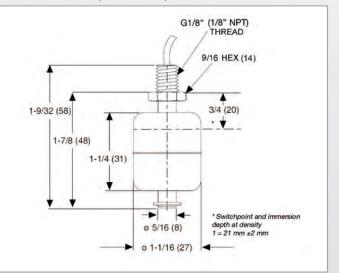

By turning the float upside down the function of the switch contact can be changed from NO (standard) in NC or vice versa. (Not possible with SPDT contacts)

The contact modes (NO or NC) are defined on the basis of an empty tank and for a level switch mounted through the top.

By turning the float upside down the function of the switch contact can be changed from NO (standard) in NC or vice versa. (Not possible with SPDT contacts)

The contact modes (NO or NC) are defined on the basis of an empty tank and for a level switch mounted through the top.

#### Dimensions (mm / inch)

#### **Color code**

Level switch without test function

#### **Features**

Rugged and sturdy design for bilge monitoring

#### **Applications**

Shipbuilding, sewage works yacht building

### **Technical Data**

Materials: Stem, bracket and float chamber: Float: Cable: Cap nut:	stainless steel PE Polymer, halogen-free, UL-V0 PA
Operating pressure:	max. 3 bar (float / +20 °C)
Temperature range:	max20 °C +70 °C
Fluid specific gravity:	min. 0.80 g/cm3
Immersion depth: at density 1: at density 0.8:	28 ±2 mm L1 ~18 mm 35 ±2 mm L1 ~11 mm
Mounting position:	vertical ±15°
Protection class:	IP67, IP68 on request (not shipyard approved)
Electrical connection:	Polymer cable, 2 x 0.75 mm <sup>2</sup>
Cable length:	2 m / 5 m / 10 m / 15 m
Contact type*:	SPST switch (NO) (marking at bottom) By turning the float upside down: SPST switch (NC) (marking at top)
Contact rating:	max. 230 V AC / DC max. 2.0 A max. 40 VA / W
Weight:	approx. 175 g
Approvals:	GL, BV, ATEX on request

\* The contact types (NO or NC) are defined on the basis of dry position of float and cable pointing vertically upwards.

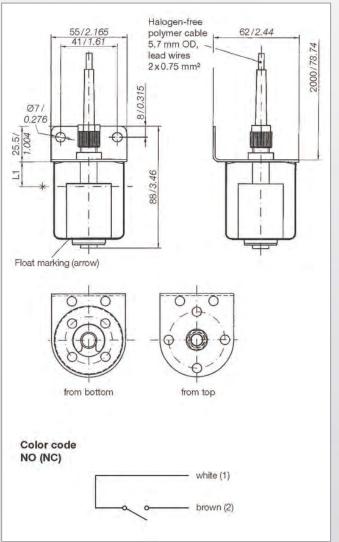

#### **Order Code**

Туре	Contact type	Cable type / length	Order No.

#### **Dimensions** (mm / inch)

#### **Function**

The multi Level Switch Series UNS1000 can be supplied with up to 5 switchpoints (see "Max. Switchpoints"). Besides the float operated reed contacts to detect liquid levels, the UNS1000 can be supplied also with a PT100 temperature sensor or with a temperature switch TS.

A wide selection of mounting elements, electrical connections, various materials and options allow you to "design" your own switch, within the given dimension limits, for your particular application. (see "Order code") The min. dimensions are based upon the medium water. Depending on the density of other fluids this dimension can vary several millimeters. The contact modes (NO or NC) are defined on the basis of an empty tank and for installation through the top or through the bottom (when specified as "-U"). When not specified otherwise we will set the switch position for density 1 (water) and the switch action to be on moving upward.

Max. temperature range: -10°C...+105°C (Standard), Option: -40°C...+150°C, Silicone cable (-HT)

The mounting position should be vertical,  $\pm 30^{\circ}$ , though top or bottom.

#### **Technical Data**

Max. Operating Pressure:	15 bar, BN25, VA27 and VA44 float, 4 bar, BN18 float
Max. Temperature Range:	-10 °C+105 °C, PVC-cable -40 °C+150 °C, Silicone cab. (-HT)
Min. Fluid Specific Gravity:	See specifications below
Mounting Position:	Vertical, ±30°, through top or bottom
Protection Class:	IP54: ST2, K (Si-cable) IP65: ST1, KL6, KL12, PG, K (PVC cable) IP67, IP68: on request
Weight:	Depends on length and design
Options:	See order code

**Barksdale**<sup>®</sup>

DUAL = One float with two level switch points

The multi Level Switch Series UNS2000 can be supplied with up to 6 switchpoints (see max. switchpoints) and with a length of max 3000 mm.

Besides the float operated reed contacts to detect liquid levels, the UNS 2000 can be supplied also with a temperature sensor and/ or temperature contact(s), which are to handle as switchpoint(s) please note max. switchpoints! A wide selection of mounting elements, electrical connections, various materials and options allow you to "design" your own switch, within the given dimension limits, for your particular application. Very long units or large flanges can cause high shipping and installation costs and "split" versions might be the answer. Consult us for the best combination. The min. dimensions are based upon the medium water.

Depending on the density of other fluids this dimension can vary several millimetres. The contact modes (NO or NC) are defined on the basis of an empty tank and for installation through the top or through the bottom (when specified as "-U"). When not specified otherwise we will set the switch position for density 1 (water) and the switch action to be on moving upward. Temperature sensor (PT100) and/ or the temperature switch, a Bi-metall hermetically sealed element, are installed only in the bottom of the stem. That means:

Dimensions B + 10 mm with temperature sensor PT100) =  $B_{PT}$ Dimensions B + 40 mm temperature switch (TP) =  $B_{TP}$

ATEX Ex ia (intrinsically safe) Approval, see www.barksdale.de Exi = **Barksdale**® Subject to technical changes.

### **Options**

In co-operation with our customers new products can be designed. Please see some examples:

## Single switch side mounted

with special tank connection and M12x1 mm connection

#### **UNS1000**

with low density float ( <sub>min</sub> = 0.4g/cm<sup>3</sup>)

UNS-90-VA

Level Switch made of Stainlees Steel with G3/8 mounting thread and angled 90° for side mounting

#### **UNS-PTFE**

Level switch made of PTFE for process industry (resistance)

### Single switch

Level adjustment over the thread

### Single Switch with damping tube (DR)

Damping oscillation fluids and float movements

### **Options**

#### UNS1000 / 2000

with cooling stem for refrigeration and steam plants

#### **Single switch**

complete made of plastic

UNS1000 with damping tube (DR) Damping oscillation fluid and float movements

#### **UNS1000-G** Level switch with float chamber (Bypass)

#### UNS2000 with contact rod for grease level measurement

**UNS2000-S-TF** Level switch with test function during the operating process

# Notes

### Notes

### Notes

### Experts Specialists for monitoring and control of

- Pressure
- Temperature
- ► Level
- ► Flow

Barksdale develops market-focused solutions for customers in the fluid power, transportation and industrial equipment markets focusing on applications that include:

Sensors & Switches for Wind Turbines

Truck, trailer and bus suspensions

Shipbuilding

Sensors for Hydraulic Power Packs

Oil and gas exploration
